# Getting started with "Set Trips to Saved" Delphi version

1) Make sure the .system folder is visible on the XT(2).
   https://www.zumouserforums.co.uk/app.php/ZXT-P84
2) Connect the XT(2) to your PC/Laptop and wait for the device to appear in Windows Explorer.
3) Start the program.
4) The Zumo XT(2) should be listed. If not you can try 'Refresh devices'.
   See: Screenshot 1
5) Double click on the Zumo XT(2)
6) Browse to Internal Storage\.System\Trips
   See: Screenshot 2
7) Click on Check Trips. The program will now check if the trips are imported, or saved. A saved trip will have the checkbox ticked.
   Note: The next time you start the program, it will have remembered your selection, and start rightaway in 'Trips'.
8) You can use Shift/Crtrl + mouse click to select multiple lines and click on 'Set selected trips to saved/imported' to change the mImported flag.

Known issue: The first action after you have made a change can take a few seconds. (10-20 secs) Subsequent actions will be fast.

The program copies the trip files to a folder on your hard drive, reads the files, makes changes. And then copies them back to the XT(2). The temp folder is listed on top.
